

# Speeding offence detection and disposal in England and Wales 2021

**An RAC Foundation report by Doreen Lam, research analyst at the RAC Foundation, and Dr Adam Snow, Liverpool John Moores University**

This report provides an annual update on statistics on speeding offences detected by police forces in England and Wales. It is based on Home Office data<sup>1</sup>.

This report uses figures from January 2021 – December 2021 which includes the last national lock down period in March 2021.

In 2021, 2,854,757 speeding offences were detected in England and Wales, an 18% increase on the 2,424,882 figure for the previous 12 months.

Over the last five years, acts of illegal speeding detected have increased 29%. Over the past eight years they have increased 51%. The most current data (2021) has the largest number of speeding offences detected since 2011 (the earliest available year in the dataset).

Speeding offences made up 86% of total motoring related offences in 2021. The other 14% comprised such things as: licence, insurance and record keeping offences; careless driving; seat belt offences; use of a hand-held mobile phone whilst driving; neglect of traffic signs, directions and of pedestrian rights; and vehicle test condition offences. More details are shown in Table 2.

The police force which detected the most speeding offences in 2021 was the Metropolitan Police (including City of London). It was followed by: West Yorkshire, Greater Manchester, Lincolnshire and Thames Valley. Durham (up 248%) and Cleveland (134%) saw the largest year-on-year percentage increases in detections despite having anti-speeding campaigns in August 2021<sup>2</sup>.

As suggested in the previous report "the constabulary-level variations in detection rates are significant but difficult to understand from the bald numbers. However, reasons for the differences are likely to include road network length, road type, traffic volume and makeup, local priorities dictated by police and crime commissioners, financial and human resources, and the availability of detection technology."

Table 3 shows how speed limit offences were disposed of. In 2021, most speeding offences resulted in a speed awareness course (43%) or a fine (30%), similar proportions to those in 2020.

However, 476,384 offences detected (17% of the total) were disposed of by being cancelled.
